## Question :

Write a code and connections in wokwi for the ultrasonic sensor. Whenever the distance is less than 100cms send an "Alert" to IBM cloud and display in the device recent events.

## Code:

```

payloadLength);
//-----credentials of IBM Accounts-----

## IBM cloud output:

The screenshot displays the IBM Cloud IoT Platform console. On the left is a dark sidebar with various icons. The top navigation bar includes 'Browse', 'Action', 'Device Types', and 'Interfaces'. A blue 'Add Device' button is in the top right. The main content area has tabs for 'Identity', 'Device Information', 'Recent Events', 'State', and 'Logs'. The 'Recent Events' tab is active, showing a message: 'The recent events listed show the live stream of data that is coming and going from this device.' Below this is a table with four columns: 'Event', 'Value', 'Format', and 'Last Received'. The table contains four rows of data, all with the event name 'event\_1' and a JSON value indicating a distance alert.

| Event   | Value  | Format | Last Received     |
|---------|--|--------|-------------------|
| event_1 | {"distance":7,"Alert":"Distance less than 10"} | json   | a few seconds ago |
